BIOGUIDE

Staff Contribution Workflows

Document Date: November 10, 2026. Supersedes BOG-WF-2026-001 (September 19, 2026).

> *How BiOGuide staff contribute: what each workflow is for, the steps to follow, and who to contact. Where this guide and an older instruction disagree, this guide applies.*

Standing Policy: Contribute Whenever Free

Every staff member is encouraged to contribute using any of the workflows below whenever they have free time to do so. This is separate from, and does not replace, specific work assigned by management, which takes priority when given.

Before You Start: Your Staff Account

Workflows D, G and I need a staff account. Staff status is set in the database by the Director, so it cannot be requested through the site: ask the Director to mark your BiOGuide account as staff. Use your own account only, and never share your login or any key you are given.

Master: Idea Contribution

All ideas for BiOGuide improvements and new features should be submitted through the master contribution spreadsheet. Management will review and provide appropriate consideration upon submission.

Access: *Master Contribution Spreadsheet*

A BiOGuide Social Content Contribution

Contribute to finalizing videos for the BiOGuide Instagram and YouTube pages by adding explanations of problems of the day, or by creating explanations of fascinating biological concepts and Olympiad preparation guides.

Workflow Steps

1. Visit the master contribution spreadsheet.
2. Navigate to the InstaReels sheet.
3. Read the script and watch the video in the Drive folder for context.
4. Add your name to the dropdown list if you accept the quotation.
5. Record your contribution (preferred: facecam speaking the script; also accepted: audio only).
6. When complete, highlight the row green for done, or yellow for work in progress.
7. Upload your recorded file to the Drive folder named in the script, with your initials in the filename.

B Question Bank Population

Help populate the BiOGuide Question Bank by organizing and uploading questions sourced from competitions and problem sets.

Workflow Steps

1. Find questions and save them in the appropriate topic and subtopic folder.
2. Sort them by difficulty into three folders: Easy, Moderate and Hard.
3. Name each file Qno._by_YourName_CompetitionSourceName.filetype.
4. Where possible, also create a solution file named Qno._by_YourName_Solution.filetype.
5. Contribute at your own pace. There is plenty of work available.

Folder: *BiOGuide Question Bank Folder*

C Content Review

Website reviews, content feedback and suggestions are all valued contributions to improving BiOGuide.

Submission Process

1. Prepare your review, feedback or suggestions as a document or file.
2. Forward it directly to the Director.
3. Note your contribution in the Feedback sheet of the master contribution spreadsheet.

D Answering Doubts

Doubts is where students post the questions they are stuck on. Anyone can read and ask, but only staff accounts can reply, and the database enforces this.

Workflow Steps

1. Sign in with your staff account and open bioguide.world/doubts/.
2. Filter by the subjects you know well and open a doubt that has no answer yet.
3. Answer the question that was asked, show the reasoning, and link the relevant BiOGuide note or past paper where it helps.
4. If you are not confident of an answer, leave the doubt for a colleague who covers that subject.

E Reporting and Moderation

Staff help keep BiOLab, Doubts and BiOrchive accurate and safe by spotting problems. Removing or restoring content is carried out by the Director only.

Access & Process

1. On BiOLab, use the Report button on the protocol or result, with a one-line reason.
2. For anything else, message the Director with the page link and what is wrong.
3. Send privacy, login or safety concerns straight to Bhavyaa Gunwal (Senior Partner, Trust and Safety) and the Director.

F BiOrchive Contribution

BiOrchive is BiOGuide's past-paper archive: timed attempts, instant scoring, worked solutions and leaderboards. Rights come first. Before working on any paper, check the licence or rights statement on the source. If it is missing, restrictive or unclear, stop and ask the Director.

Two Ways to Contribute

1. Without code: submit the exam and answer-key PDFs at bioguide.world/papers/contribute/, with a note on where they came from and what licence applies.
2. With git: follow CONTRIBUTING_PAPERS.md in the BiOGuide repository, which runs the full ingestion pipeline and ends in a pull request.

G Reviewing Paper Submissions

Submissions from the site land in a staff review queue with three lists: Paper Submissions, Content Corrections and Community Solutions/Notes. Approve and Reject only record your decision. Nothing on the site changes until the Director acts on approved items.

Workflow Steps

1. Sign in with your staff account and open bioguide.world/papers/contribute/review/.
2. For a paper, read the licence note and source first. If the rights are unclear, reject it and say why in the notes.
3. For a correction or a community solution, check it against the original paper and its official answer key.
4. Write a short staff note explaining your decision, then press Approve or Reject.

H Country Guides

Each country on the preparation map has a firsthand guide written by a past national competitor, an official outline that explains the official selection path while we look for an author, or nothing yet. The most useful thing staff can do is find authors.

Workflow Steps

1. See which countries still need an author at bioguide.world/contribute-a-guide/.
2. Reach out to past national team members you know and send them that page. Its email button fills in the country for them.
3. When someone is interested, introduce them to the Director by email so the guide can be planned.
4. If you spot an error in an official outline, email the Director the correction with a link to the official source. Each outline shows the date its sources were last checked.

I BiOLive Hosting

BiOLive is the weekend programme of live paper solving on Zoom. Hosts need two things: a staff account and a personal staff key issued by the Director. Neither works alone.

Workflow Steps

1. Ask the Director for a staff key. Keep it in a password manager, and never share it or paste it anywhere public.
2. Open bioguide.world/live/staff/, sign in and enter the key. Ten wrong attempts within fifteen minutes temporarily lock your account out of the staff tools.
3. Create or edit the weekend session. Students can register until 24 hours before it starts.
4. Copy the registrants' emails and send them the Zoom link yourself by email. The link is never put on the website.
5. After the session, mark attendance, then press Lock this page, especially on a shared computer.

J BiOClash Contribution

BiOClash is BiOGuide's original Olympiad competition, with problem sets built from real research papers. Its material is restricted.

Access: *As of November 2026, BiOClash material (papers, problems and answer keys) is available only to Nishit Kalani, Bhavyaa Gunwal, Dihui Yu and Davi P. Tsuchie. No other staff member has access.*

Do not ask participants or other staff for BiOClash material. Report anything that looks like a leak to the Director at once. To discuss joining the BiOClash team, contact the Director.

Current Management

Role	Name
Founder, Director and Software Engineer	Nishit Kalani
Senior Partners	Bhavyaa Gunwal, Dihui Yu
Email	r6394175@gmail.com

Questions or support? Contact the Director through the master contribution spreadsheet or by email.
